To: Harshit Sanghvi &lt;hs2619@nyu.edu&gt;

You ended up missing a LOT because you got the output format wrong. for instance, look at your output for case 1:

```
GLOBAL:
  I:port:80
  I:num_threads:4
  S:ssl_key:/etc/mycreds.pem
  F:max_bandwidth:10.0
HOST www.example.com:
  S:http_root:/home/example/
HOST www.example2.com:
  Q:http_root:""/home/example\2/"
  I:0:port:8080
```

There are supposed to be 3 colons per line, not 2. The only place you have 3 is on the last line. This probably won't affect your final grade, but you should still fix this, it's a silly mistake (something that automated testing would have found).

Ada implementation:

Testing the reference cases:

Case 1: failed.

Case 2: passed.

Case 3: failed.

Case 4: passed.

Case 5: passed.

Case 6: passed.

Passed 4 out of 6.

Testing the cases that should succeed:

Case 1: failed.

Case 2: failed.

Case 3: failed.

Case 4: failed.

Case 5: failed.

Case 6: failed.

Case 7: failed.

Case 8: passed.

Case 9: failed.

Case 10: failed.

Case 11: failed.

Case 12: failed.

Case 13: passed.

Case 14: failed.

Case 15: failed.

Case 16: failed.

Case 17: passed.

Case 18: failed.

Case 19: failed.

Case 20: failed.

Case 21: failed.

Case 22: failed.

Case 23: failed.

Case 24: failed.

Case 25: failed.

Case 26: failed.

Case 27: failed.  
Case 28: failed.  
Case 29: failed.  
Case 30: failed.  
Case 31: failed.  
Case 32: failed.  
Case 33: failed.  
Case 34: failed.  
Case 35: failed.  
Case 36: failed.  
Case 37: failed.  
Case 38: failed.

Passed 3 out of 38.

Testing the cases that should give errors:

Case 1: failed.  
Case 2: failed.  
Case 3: passed.  
Case 4: passed.  
Case 5: failed.  
Case 6: passed.  
Case 7: (Warning; error types do not agree) passed.  
Case 8: passed.  
Case 9: failed.  
Case 10: passed.  
Case 11: failed.  
Case 12: passed.  
Case 13: passed.  
Case 14: failed.  
Case 15: failed.  
Case 16: passed.

Passed 9 out of 16.

Total points: 44
